# WOOD'S CROP SPECIAL

Giving Timely Information and Prices of Seasonable Seeds

PUBLISHED BY T. W. WOOD & SONS SEEDSMEN RICHMOND VA.

VOL. XIX.

FEBRUARY EDITION

1924

Our "Wood's Crop Special" is issued monthly during planting seasons. There is no subscription price, but is mailed free upon request. If any of our customers do not receive Wood's Crop Special regularly, and desire to do so, advise us and we will place your name on our regular mailing list.

## SEASONABLE NOTES

In this, the first regular issue of **Wood's Crop Special** in 1924, we think it advisable to give our customers some interesting information that every farmer should know.

To begin with, **Wood's Seeds** have had the esteem of farmers throughout every section of this country as well as abroad; more so in the Southern States, where the bulk of our business is conducted. The fact that we have handled the very highest grade seeds of known quality for the past forty-five years has placed us in a position of supplying seeds that we know are adapted to our Southern climatic conditions, and our reputation has been built up largely on this fact, which takes years of actual study to obtain.

## The Vital Importance of Testing Seeds

Our Seed Testing Laboratory has been under the direct supervision of a seed expert, who has handled the testing of Wood's Seeds for nearly twenty years. In this laboratory there were completed last year over 7,000 germination and purity tests. We believe we are safe in saying that this number of tests was not equaled in any one laboratory south of the Mason-Dixon Line and very few, if any, in the Northern States outside of the Government and a few State Departments. This gives a very good idea of how careful we are in sending out only the very highest quality seeds. We are continually testing our seeds in an endeavor to always keep up the highest standard of quality, as well as always having a great many tests made by the various State and Government analysts.

We know from actual experience that seeds are being sold throughout the South at prices slightly lower than high-grade seeds can be sold, that have never been near a germination chamber. It is simply astounding to think that farmers will buy seeds from any source, and plant them without any statement of analysis. There are untold quantities of seeds that will be sold to farmers this year on which the analysis is merely a guess-work proposition, and figures are placed on the tags that under normal conditions will pass the various State requirements.

We do not guess about the quality of Wood's Seeds. They must pass certain standards from actual tests before they are offered or exposed for sale.

## About Origin of Seeds

At this time there is considerable talk about this one fact, and rightly so as seeds, like everything else, are not all adaptable to the various climatic conditions. We have always given this point careful study, and would not under any circumstances send out seeds that we knew were not adapted to

the climatic conditions where they will be used. In fact, the high standing which Wood's Seeds possess is due very largely to their adaptability to our Southern climate, and any seeds purchased under our **Trade Mark Brand** tags can always be depended upon to be strong, vigorous seeds that will give the best results obtainable under favorable conditions.

## The Best Seed Cleaning Facilities in the South

Our methods of cleaning seeds have always been given the most careful attention, and with our battery of various cleaning machines we are in a position to supply seeds of high tested purity, seeds that are free from light, shrivelled grains. Shrivelled seeds cannot produce healthy and strong plants. Do you know that every bushel of Oats, Wheat, Rye and other grains are put through our cleaning machines before being sent out to our customers? Compare this with the ordinary stocks being sold, where Oats as well as other grains are taken direct from the ears, bagged, and labeled as seed Oats, which are just elevator run No. 2 Oats. It is very easy to understand how grains handled in this manner can be sold at a cent or two cheaper than our **Trade Mark Brand** Seed, and as a matter of fact you are really paying a higher price for such grain when the purchase is figured out on the actual analysis. Our Clover and Grass Cleaning Machines are the best that can be obtained, to which have been added our own improvements.

## Field Tests of Seeds

On our Williamson Farm in Amelia County, Va., we are continually making comparative field tests of seeds in order to determine the productivity and adaptability of seeds from various sources. These tests are of untold value in determining the real value of seeds produced in different localities, and are the basic foundation for the high standing of **Wood's Trade Mark Brand Seeds**.

## In Conclusion

When you take all of the aforesaid statements into consideration, it is easily understood that the process of marketing the best quality adaptable seeds is no small matter, and the handling of a seed business in a highly satisfactory manner requires special knowledge of their origin and adaptability.

Buying your seeds from reliable sources of known integrity and reliability is the first step in successful farming. Do not always be guided by price, for seeds, like any other merchandise, are sold according to quality.

In conclusion, the purchases of your seeds should always be made from a reliable seedsman, who you know has the facilities for, and reputation of, supplying only the best.

## WOOD'S CROP SPECIAL

### FACTS ABOUT IMPORTED RED CLOVER

In order to correct misleading statements, which are not based on facts, the United States Department of Agriculture is issuing under date of December 20, 1923, and for immediate release, a bulletin giving some important facts on imported and domestic clovers. In this bulletin the Department of Agriculture has this to say about imported clover:

"So far as trials have been made Chilean, French and Northern European Clover Seed have given good results in the Ohio and Mississippi Valley and in the North Atlantic Coast States.

"Italian Red Clover is unsuitable to any part of the clover area except the Pacific Northwest. Italian seed resulted in poor crop or failure in nearly every trial made by the Department."

For the past thirty years, or probably more, America has been both an exporter and an importer of clover seed, exporting to Europe when her crop was heavy and when she had more than enough for her own use, and importing from Europe when her crop was short. The clover mostly imported has been coming from the Northern countries of Europe. During the past season the northern part of France, which has some of the best cultivated lands in the world, raised a magnificent crop of Red Clover, and owing to the shortage of American Red Clover, something like 75,000 bags have already been bought for importation to America from this section. Our own tests have shown that French Red Clover is suited to Virginia and the Middle Atlantic States.

The unsuitability of Italian Red Clover is so well understood that we believe no responsible seedsmen would either import or sell this seed. Our own customers can be absolutely assured that we never would sell Italian or other unsuited clovers.

We are very fortunate in securing several car loads of the very highest grade **American Northwestern Grown Red Clover**, testing over 99½% pure. This seed is of the highest grade quality obtainable and admirably adapted to any climatic conditions in this country. This seed we are offering under our Trade Mark Brand, marked "**Pera**."

We can also supply French Grown Seed, grown in the northern part of France, which has given very good results on our test farm for the past several years. This seed we offer under our mark "**Hano**," and is the highest quality of imported seed.

The American crop of Red Clover the past season was only 45% of the preceding crop, and there is every indication that stocks of native grown seed will be exhausted before the actual planting season is over. Native grown seed should have preference, but in view of the shortage in clover seed, the use of imported seeds of suitable kinds would seem advisable for practical reasons. **We do not handle Italian or other unsuited clovers.**

o

### COTTON SEED

Realizing that there will be an exceptionally heavy demand for the highest grade cotton seed obtainable, we have given the selection of our seed the most careful study and attention and all of our stocks were secured from reliable sources. In offering our various varieties we believe they are as free from mixture and disease as is possible to obtain. Our seed stocks have been carefully selected and ginned to prevent mixture, and every precaution used to supply our trade with seed that can be depended upon for the best results. During the past two months there has been a rush of buying orders for cotton seed throughout the South, and with a consequence that ordinary gin-run stocks have been sold for seed purposes to a very large extent. Planting mixed seed in the more northerly cotton growing States means considerable yield reduction, and seed of this character should be avoided.

Our entire seed stocks were drawn from the extreme northern section of North Carolina and eastern Virginia. Seed produced in these localities are far superior for the Southern States to stock secured further South, due to their quicker growth, which is so essential for a successful crop. Cotton, like corn, produced in higher latitudes will come quicker than those grown further south.

In order to give our customers complete information regarding the cotton crop and knowing that it will be a new adventure with a large number of Virginia farmers, we have especially prepared a cotton circular which gives complete information about the handling of this crop from practically every angle. Write for it.

### SEED POTATOES

At the time this is written the Co-operative Potato Growers Association, who are handling the bulk of seed stock in Maine this year, have withdrawn their quotation on Irish Cobbler Potatoes. This bears out the opinions that there is an unusually short supply of this variety, and consequently much higher prices are in view the coming season.

Every year there are a great many consignments of mixed potatoes made to the Southern markets by potato brokers in the New England States. Undoubtedly, due to the scarcity of Irish Cobblers, there will be a good many cars of potatoes shipped as Cobblers which will be badly mixed, and care should be used against obtaining this stock, as planting mixed stocks of potatoes is suicidal for crop returns. Last year six car loads of potatoes were refused by seedsmen in Richmond on account of inferior mixed stock, but later were actually sold as seed potatoes. These conditions account for the variation in prices of so-called Maine Potatoes.

Due to the relatively low prices of **Virginia Second Crop Potatoes** in comparison with Maine stock, they have been in very heavy demand, and stocks are running very low. The demand for Virginia Potatoes has been increasing steadily, due to their superior yielding qualities. Below we are giving extracts from several letters from our customers regarding them.

We are in position to supply our customers with **Certified Maine Grown Irish Cobblers** which were grown under State Experiment Station rules, and every precaution used to prevent mixture and disease. We can highly recommend them as being the very best Maine seed stock obtainable.

In addition to our Certified Cobblers we will have our usual **High-Grade Maine Grown Cobblers**, which are dependable and genuine stock, but not certified. These potatoes were secured from the Maine Growers Exchange and shipped to us under their **Pine Tree State Brand**, which represents the highest quality of Seed Potatoes, being field inspected.

We believe early booked orders for potatoes are advisable at present prices. On all booked orders we require a deposit of \$1.00 per bag at the time the order is placed, which will be credited on invoice at time of shipment.

### About Virginia Second Crop Potatoes

"The Second Crop Irish Cobbler Potatoes brought an abundant crop."—Dr. W. F. FISHER, Campbell Co., Va., September 29, 1923.

"The Second Crop Virginia Grown Potatoes will double yield the Maine seed that we usually get, planted side by side."—R. H. GLEASON, Citrus Co., Florida, Nov. 29, 1923.

"I am glad to say that I dug from the two barrels of Second Crop Irish Cobbler Potatoes I got from you 48 barrels of No. 1 and 5 barrels of No. 2; 53 barrels in all. I prefer the Second Crop seed; have been using them for several years. If planted 10 or 15 days earlier than Northern grown seed, they can be dug as early and often are freer from disease."—JOHN H. WILLIS, Carteret Co., N. C., Oct. 22, 1923.

o

### WOOD'S HIGH-GRADE FERTILIZERS

The use of high-grade fertilizers for any and all crops cannot be emphasized too much. Our standard brand fertilizers have been well and favorably known for many years to our customers in Virginia and other States. They have given uniform satisfaction wherever used because made of the best materials. We draw special attention this season to our **New Standard Cotton Fertilizer**, and recommend it to our Virginia farmers who are planting cotton this year for the first time. Our complete line, with prices of fertilizer, including **Acid Phosphate, Nitrate of Soda and Sheep Manure**, etc., is shown on the third page.

o

### WOOD'S PARCEL POST SPECIAL

Gives our customers the exact cost of practically all seasonal seeds in quantities up to fifty pounds. This Special has met with favor amongst our customers ordering in small quantities and tells the exact cost delivered to your door with all charges paid for bags, insurance and postage.

Parcel Post is the quickest, safest and easiest method of delivering seeds in small quantities. For orders for larger quantities, freight and express are cheaper.

## WOOD'S HIGH-GRADE FERTILIZERS

### NOTE REDUCED PRICES.

We have given careful consideration to the following grades of fertilizers for the various crops, and can confidently recommend them for Southern crops. Only the highest grade ingredients used in our Standard Brands.

**STANDARD VEGETABLE FERTILIZER.** Available Phosphoric Acid 8%; Ammonia 3%; Potash 3%. Recommended for all vegetable crops. Apply 800 to 1,000 pounds per acre. Bag of 50 lbs., \$1.15; 100-lb. bag, \$1.90; 200-lb. bag, \$3.40; per ton, \$32.50.

**STANDARD POTATO FERTILIZER.** Analysis 8-3-6. Especially prepared for Irish and sweet potatoes. Apply 8.00 to 1,000 lbs. per acre. Bag of 100 lbs., \$2.00; 200-lb. bag, \$3.65; per ton, \$35.00.

**STANDARD CORN FERTILIZER.** Analysis 12-2-4. Contains the necessary ingredients to increase yield of grain and fodder, as well as a quick growth. Recommended by the Virginia Experiment Station. Apply 300 to 500 pounds per acre. Bag of 200 lbs., \$3.35; per ton, \$32.00.

**STANDARD COTTON FERTILIZER.** Analysis 8-3-3. Contains plant food that will promote a strong early growth of vigorous plants that will yield length and quality of fiber. Apply 400 to 500 lbs. per acre. On light, sandy lands, divide the fertilizer into two or three applications. Bag of 200 lbs., \$3.45; per ton, \$33.00.

**WOOD'S MARKET GARDEN FERTILIZER.** Analysis 8-5-3. Prepared especially for market growers. Also adapted for grass and clover after the first cutting, to force the second crop. For vegetables apply 800 to 1,000 lbs. per acre; for grasses and clovers, 300 to 500 lbs. per acre. Bag of 200 lbs., \$4.15; per ton, \$40.00.

**WOOD'S GRASS AND LAWN FERTILIZER.** Analysis 12-2-2. For use when starting a new lawn, top dressing as well as for applying on grass and clover fields. 10-lb. bag, 50c.; 25-lb. bag, 75c.; 50-lb. bag, \$1.20; 100-lb. bag, \$2.00; 200-lb. bag, \$3.45; per ton, \$33.00.

**LISTER'S STANDARD SUPERPHOSPHATE.** Analysis 9-3-2. Made of pure animal bone, and on account of its lasting qualities the effects are very noticeable on succeeding crop. Bag of 200 lbs., \$3.75; per ton, \$36.00.

**STANDARD BONE MEAL.** Analysis: Ammonia 3%; Bone Phosphate of Lime 50%; equivalent to 22% Phosphoric Acid. Apply 300 to 500 lbs. per acre. Bag of 200 lbs., \$4.45; per ton, \$43.00.

**ACID PHOSPHATE.** Analysis: 16%. Apply 300 to 500 lbs. per acre. Bag of 200 lbs., \$1.75; per ton, \$16.00.

**NITRATE OF SODA.** For forcing crops. 5 lbs., 40c.; 10 lbs., 60c.; 25 lbs., \$1.25; 50 lbs., \$2.00; 100 lbs., \$3.50; 200-lb. bag, \$6.65; 5 bags or more, \$6.50 per bag; per ton, \$64.00.

**LIME MARL.** Bag of 200 lbs., \$1.15; per ton, \$10.00.

**WOOD'S HIGH-GRADE SHEEP MANURE.** 25-lb. bag, 85c.; 50-lb. bag, \$1.50; 100-lb. bag, \$2.65; 500 lbs., \$12.00; ton. \$45.00.

## LAWN GRASSES

(See PARCEL POST SPECIAL for Postpaid Prices.)

### WOOD'S EVERGREEN LAWN GRASS

The best mixture for an all-year-round lawn, where proper care and attention can be given. One pound sows 400 square feet; 50 to 75 pounds per acre. Not prepaid, per lb., 35c.; 5 lbs., \$1.70; 10 lbs., \$3.30; 25 lbs., \$8.00; 50 lbs., \$15.50; 100 lbs., \$30.00.

### WOOD'S DROUGHT-RESISTING LAWN GRASS

This mixture, containing Bermuda Grass, is especially recommended for the Southern States, where the finer grasses will not survive the extreme heat. One pound sows 300 square feet; 35 to 40 pounds per acre. Not prepaid, per lb., 40c.; 5 lbs., \$1.85; 10 lbs., \$3.60; 25 lbs., \$8.75; 50 lbs., \$17.00; 100 lbs., \$33.00.

### WOOD'S PERMANENT LAWN GRASS

Composed of robust growing grasses, especially adapted for parks and large places where a lawn and grazing are to be combined. One pound sows 300 square feet; 40 to 50 pounds per acre. Not prepaid, per lb., 35c.; 5 lbs., \$1.60; 10 lbs., \$3.00; 25 lbs., \$7.25; 50 lbs., \$14.00; 100 lbs., \$27.00.
